DATASHEET

SonicWall Gen 7 NS*sp* Series

The SonicWall Network Security services platform™ (NS*sp*) Series has next-generation firewalls with high port density and multi-gig speed interfaces, that can process several million connections for zero-day and advanced threats. Designed for large enterprises, higher education institutions, government agencies and MSSPs, it eliminates attacks in real time without slowing performance.
It is designed to be highly reliable and deliver uninterrupted services to organizations.

NS*sp* Spec Preview. View full specs »

100 GbE	Up to 100 Gbps	40M
Ports	Firewall inspection throughput	Max Connections (NS*sp* 15700)

HIGHLIGHTS

SonicWall NS*sp* Series

- High port density
- 100 G ports
- Integrates with on-premises and cloud-based sandboxing
- Simplified centralized SaaS and on-premises management via Network Security Manager
- Advanced DNS Filtering
- Reputation-based Content Filtering Service (CFS 5.0)
- Wi-Fi 6 firewall management
- SonicWall Unified Management Support
- Network access control integration with Aruba ClearPass
- 80+ Gbps threat prevention throughput
- Redundant power
- Up to 100 Gbps firewall inspection throughput
- TLS 1.3 support
- Supports millions of simultaneous TLS connections
- Low TCO
- Powered by SonicWall Capture Labs threat research team
- Cloud Secure Edge Connector support

SONICWALL®

Enterprise-Class Firewalls

As businesses evolve along with an increase in managed and unmanaged devices, networks, cloud workloads, SaaS applications, users, Internet speeds, and encrypted connections, a firewall that can't support any one of these becomes a bottleneck. A firewall should be a source of strength and not a point of weakness.

The SonicWall NS*sp* firewall's multiple 100/40/25/10G interfaces allow you to process several million simultaneous encrypted and unencrypted connections with unparalleled threat prevention technology. With more than 70% of all sessions being encrypted, having a firewall that can process and examine this traffic without impacting the end user experience is critical to productivity and information security.

The NS*sp* 15700's unified policy enables organizations to simply and intuitively create access and security policies in a single interface.

A Cloud Secure Edge Connector integration provides secure access to private applications behind the firewalls. Users and devices can adhere to a Zero-Trust framework for application access.

Simplified management and reporting

Ongoing management, monitoring and reporting of network activities are handled through the SonicWall Network Security Manager (NSM). NSM provides an intuitive dashboard for managing firewall operations as well as delivering historical reports – from a single source. Together, the simplified deployment and setup along with the ease of management enables organizations to lower their total cost of ownership and realize a high return on investment.

Cyber Warranty

An embedded cyber warranty is offered as part of your security suite to mitigate the costs of security breaches, meet compliance requirements and promote peace of mind.

Deployment

Next-Generation Firewall (NGFW)

- Managed through a single pane of glass
- NS*sp* integrates with the rest of the SonicWall ecosystem of solutions
- Gain full visibility into your network to see what applications, devices, and users are doing to enforce policies as well as eliminate threats and bandwidth bottlenecks
- Integrate with Capture ATP with patented RTDMI for cloud-based sandboxing or on-premises malware detection

Deep Packet Inspection of SSL/ TLS (DPI-SSL) for hidden threats

- The NS*sp* provides inspection for over millions of simultaneous TLS/SSL and SSH encrypted connections regardless of port or protocol
- Inclusion and exclusion rules allow customization based on specific organizational compliance and/or legal requirements
- Support for TLS cipher suites up to TLS 1.3

Segmentation and Networking

- Operate across several segmented networks, clouds, or service definitions, with unique templates, device groups, and policies across multiple devices and tenants
- MSSPs can also support multiple customers with a clean pipe along with unique policies

Advanced Threat Protection

- SonicWall Capture Advanced Threat Protection™ (ATP) is used by over 150,000 customers across the world through a variety of solutions and it helps to discover and stop over 1,200 new forms of malware each business day
- NS*sp* integrates with Capture Security appliance to detect and block unknown threats with on-premises sandboxing thats uses Real-Time Deep Memory Inspection™ (RTDMI).

Wire Mode Functionality

- Bypass Mode for the quick and relatively non-interruptive introduction of firewall hardware into a network
- Inspect Mode to extend Bypass Mode without functionally altering the low-risk, zero latency packet path
- Secure Mode to actively interpose the firewall's multi-core processors into the packet processing path
- Tap Mode to ingest a mirrored packet stream via a single switch port on the firewall, eliminating the need for physically intermediated insertion

SONICWALL®

Content Filtering Services

- Compare requested web sites against a massive database in the cloud containing millions of rated URLs, IP addresses and web sites
- Create and apply policies that allow or deny access to sites based on individual or group identity, or by time of day.
- Reputation-based Content Filtering Service (CFS 5.0) lets you enforce Internet use policies and control internal access to inappropriate, unproductive and potentially illegal web Deployment 3 | SonicWall Gen 7 NS*sp* Series content with comprehensive content filtering covering 93 web categories. Reputation-based content filtering provides a reputation score that forecasts the security risk of a URL.

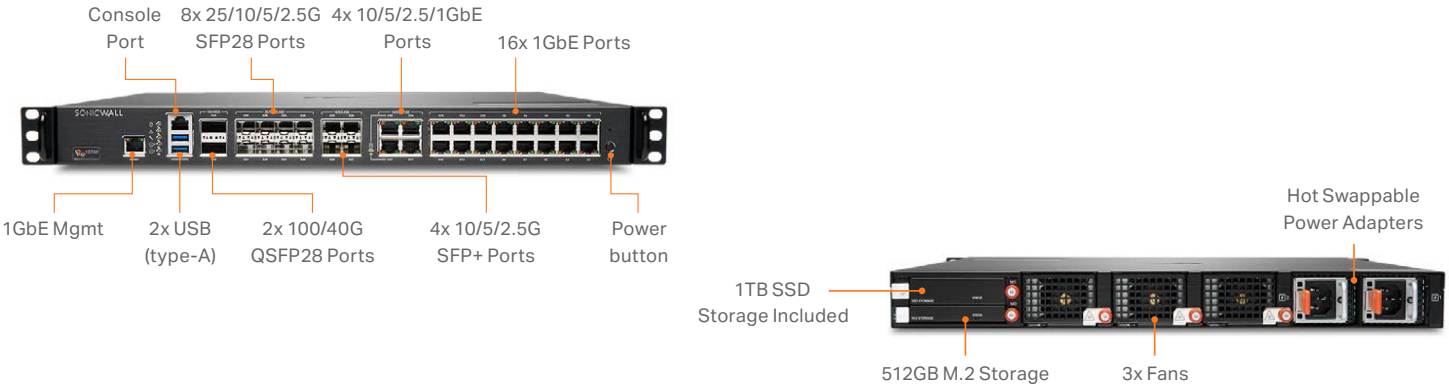

Intrusion Prevention System (IPS)

- Delivers a configurable, high performance Deep Packet Inspection engine for extended protection of key network services such as Web, email, file transfer, Windows services and DNS
- Designed to protect against application vulnerabilities as well as worms, trojans, spyware and backdoor exploits
- The extensible signature language provides proactive defense against newly discovered application and protocol vulnerabilities
- SonicWall IPS offloads the costly and time-consuming burden of maintaining and updating signatures for new attacks through SonicWall's industry-leading Distributed Enforcement Architecture (DEA)

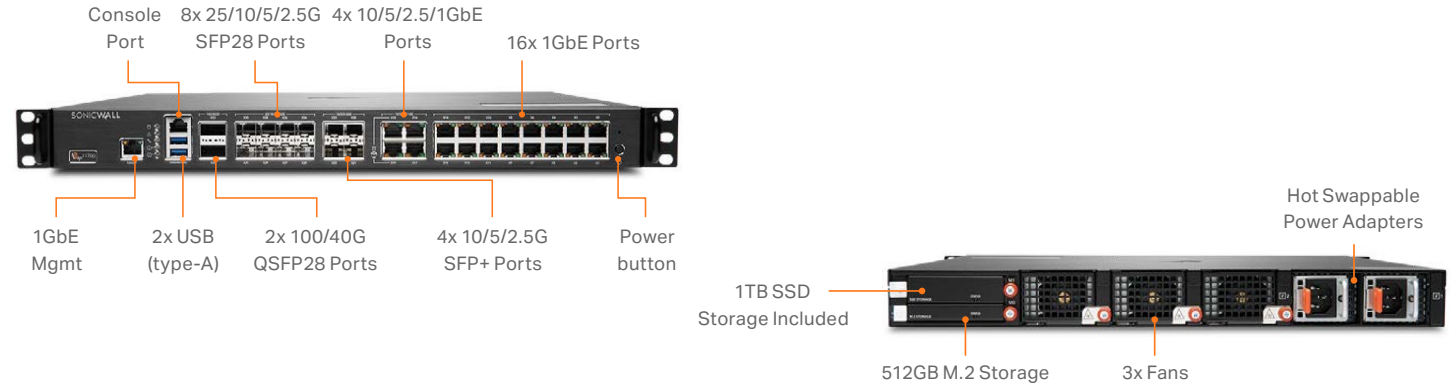

IoT and Application Control

- The NS*sp* catalogs thousands of applications through App Control and monitors their traffic for anomalous behavior

[1] Testing Methodologies: Maximum performance based on RFC 2544 (for firewall). Actual performance may vary depending on network conditions and activated services.
[2] Threat Prevention/GatewayAV/Anti-Spyware/IPS throughput measured using industry standard Keysight HTTP performance test tools. Testing done with multiple flows through multiple port pairs. Threat Prevention throughput measured with Gateway AV, Anti-Spyware, IPS and Application Control enabled.
[3] VPN throughput measured with UDP traffic using 1418 byte packet size AESGMAC16-256 Encryption adhering to RFC 2544. All specifications, features and availability are subject to change.

SonicOSX and SonicOS feature summary

Firewall

- Stateful packet inspection
- Reassembly-Free Deep Packet Inspection
- DDoS attack protection (UDP/ICMP/SYN flood)
- IPv4/IPv6 support
- Biometric authentication for remote access
- DNS proxy
- REST APIs
- SonicWall Switch integration
- SonicWall Wi-Fi 6 AP integration

Unified Security Policy

- Unified Policy combines Layer 4 to Layer 7 rules:
  - Source/Destination IP/Port/Service
  - Application Control
  - CFS/Web Filtering
  - Single Pass Security Services enforcement
  - IPS/GAV/AS/Capture ATP
- Rule management:
  - Cloning
  - Shadow rule analysis
  - In-cell editing
  - Group editing
- Managing views
  - Used/unused rules
  - Active/inactive rules
  - Sections

TLS/SSL/SSH decryption and inspection

- TLS 1.3
- Deep packet inspection for TLS/SSL/SSH
- Inclusion/exclusion of objects, groups or hostnames
- SSL control
- Granular DPI-SSL controls per zone or rule
- Decryption policies for SSL/TLS and SSH

Capture advanced threat protection

- Real-time Deep Memory Inspection
- Cloud-based multi-engine analysis
- Virtualized sandboxing
- Hypervisor level analysis
- Full system emulation
- Broad file type examination
- Automated and manual submission
- Real-time threat intelligence updates
- Block until verdict
- Capture Client integration

Intrusion prevention

- Signature-based scanning
- Network access control integration with Aruba ClearPass
- Automatic signature updates
- Bi-directional inspection
- Granular IPS rule capability
- GeoIP enforcement
- Botnet filtering with dynamic list
- Regular expression matching

Anti-malware

- Stream-based malware scanning
- Gateway antivirus
- Gateway anti-spyware
- Bi-directional inspection
- No file size limitation
- Cloud malware database

Application identification

- Application control
- Application bandwidth management
- Custom application signature creation
- Data leakage prevention
- Application reporting over NetFlow/IPFIX
- Comprehensive application signature database

Traffic visualization and analytics

- User activity
- Application/bandwidth/threat usage
- Cloud-based analytics

Web content filtering

- URL filtering
- Proxy avoidance
- Keyword blocking
- Reputation-based Content Filtering Service (CFS 5.0)
- DNS filtering
- Policy-based filtering (exclusion/inclusion)
- HTTP header insertion
- Bandwidth managed CFS rating categories
- Content Filtering Client

VPN & ZTNA

- Auto-provision VPN
- IPSec VPN for site-to-site connectivity
- SSL-VPN and IPSec client remote access
- Redundant VPN gateway
- Mobile Connect for iOS, Mac OS X, Windows, and Android
- Route-based VPN (OSPF, RIP, BGP)
- Secure Private Access by Cloud Secure Edge

Networking

- PortShield
- Jumbo frames
- Path MTU discovery
- Enhanced logging
- VLAN trunking
- Port mirroring
- Layer-2 QoS
- Port security
- Dynamic routing (RIP/OSPF/BGP)
- Policy-based routing (ToS metric and ECMP)
- NAT
- DHCP server
- Bandwidth management
- Link aggregation (static and dynamic)
- Port redundancy
- Inbound/outbound load balancing
- High availability - Active/Standby with state sync
- Wire/virtual wire mode, tap mode, NAT mode
- Asymmetric routing

VoIP

- Granular QoS control
- Bandwidth management
- DPI for VoIP traffic
- H.323 gatekeeper and SIP proxy support

Management, Monitoring and Support

- Industry and global average comparison
- Device information, application, threats
- Topology view
- Simplified policy creation and management
- Policy/Objects usage statistics
- Used vs Unused
- Active vs Inactive
- Global search for static data
- Storage support
- Internal and external storage management
- WWAN USB card support (5G/LTE/4G/3G)
- SonicWall Unified Management and SonicWall AI for Monitoring and Insight (SAMI)
- Web GUI
- Command line interface (CLI)
- Zero-Touch registration & provisioning
- Rest API
- SonicExpress mobile app support
- SNMPv2/v3
- Centralized management and reporting with SonicWall Network Security Manager (NSM)
- Logging
- Netflow/IPFix exporting
- Cloud-based configuration backup
- Application and bandwidth visualization
- IPv4 and IPv6 management
